Project Name	Personalized Networking Assistant
Maximum Marks	3 Marks

Define Problem Statements (Personalized Networking Assistant Problem Statement Template)

Create a problem statement to understand the customer's point of view during professional networking events. The Customer Problem Statement helps identify real challenges faced by professionals, students, and conference participants while initiating conversations, finding relevant discussion topics, and verifying information shared during networking sessions. A well-defined problem statement enables the development of an AI-powered Personalized Networking Assistant that generates personalized conversation starters, analyzes event themes, verifies facts using trusted sources, and improves users' confidence in building meaningful professional connections.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Professional attending a Networking Event	Build meaningful professional connections by starting relevant conversations.	I don't know how to initiate conversations with people who share similar interests.	I don't have personalized AI-generated conversation suggestions based on my profile and the event context.	Nervous, less confident, and worried about missing networking opportunities.

PS-2	A Conference Participant	Discuss event topics confidently and exchange knowledge with other attendees.	I am unsure whether the information shared during conversations is accurate.	There is no instant AI-powered fact verification during networking discussions.	Uncertain, hesitant, and less confident while communicating.
