Project Proposal (Proposed Solution) report

The proposed solution aims to develop an **AI-powered Personalized Networking Assistant** that helps professionals, students, and event participants build meaningful connections. The system uses

Project Proposal (Proposed Solution) report

The Personalized Networking Assistant is an AI-powered web application that helps users prepare for professional networking. It uses profile details, event context, Wikipedia facts, and Google Gemini to generate relevant conversation starters and follow-up content.

Objective	To provide personalized, context-aware networking assistance that helps users begin meaningful professional conversations.
Scope	Includes user profiles, event and topic inputs, Wikipedia factual context, AI-generated networking suggestions, saved history, feedback, and dashboard analytics.
Description	Users often struggle to start relevant conversations and find suitable topics during networking events. The solution provides personalized suggestions based on the user, event, and factual context.

Impact	Improves networking preparation and confidence by providing relevant, personalized suggestions and factual context.
Approach	A React and TypeScript interface connects to a Node.js/Express backend. Wikipedia provides factual context, Google Gemini generates networking content, and SQLite stores application data.
Key Features	• User registration and profile customization. • Event and topic-based inputs. • Wikipedia factual verification. • Gemini-powered networking suggestions. • Saved history, ratings, and feedback. • Dashboard analytics.

Resource Requirements

Resource Type	Description	Specification/Allocation
Computing Resources	Development and deployment	Modern multi-core computer
Memory	RAM	8 GB or above recommended
Storage	Application and database files	Adequate local or cloud storage

Software		
Frontend	Web interface	React, TypeScript, Tailwind
Backend	Server and API	Node.js, Express
Database	Persistent storage	SQLite3
AI & Integrations	Generation and factual context	Google Gemini API, Wikipedia
Development	Tools	Visual Studio Code, Node.js/npm
Deployment	Hosting	Render
Data		
Data	Application data	User profiles, event inputs, factual context, generated
